Structural Warranty

metallon XL™ is sold with a 25 year structural warranty that covers warping or twisting of any board, in accordance with the conditions listed below, and as a result of product manufacturing faults or defects. Warping and twisting refers to a board independently distorting when compared to adjacent boards. This warranty does not cover cupping or doming. Cupping and doming are caused by factors relating to the installation of metallon XL™ and are outside the control of the manufacturer.

metallon XL™ must be installed and maintained in accordance with our Installation Instructions (inside each pack) and Care & Maintenance Guidelines (available in store or online from Boral's website).

Boards that are visibly faulty or deemed visually or structurally inappropriate prior to installation should not be installed and are therefore also not covered by this or, to the extent allowed by law, any other warranty.

Who is covered?

The warranty period commences on the date of purchase. This warranty is offered to the original purchaser and is not transferrable unless it was a builder or developer who purchased the flooring. In this case, the owner of the property 12 months after the purchase of the metallon XL™ will be entitled to cover under this warranty.
